

Project name: Lemur Chat

Contributors: Emma Hofer and LC Douglas

For our chat application project, we are going to implement a python application that allows multiple clients to chat using TLS encryption. After multiple clients have connected, we will give the option to request either one-on-one or group messages with users. Once all desired clients have entered a chatroom, they will be able to send their messages, which will be received by the server and forwarded to the appropriate users.

Below is our flowchart describing how the application will work:
